

# SachaGoldman

## Location

Toronto, Canada

US + Canadian Citizen  
Willing to Relocate

## Languages

♥ Python, Swift,  
C, TypeScript

## Tools

PyTorch, Numpy,  
L<sup>A</sup>T<sub>E</sub>X, Git, Shell

## Online

### Email

[sachagoldman@icloud.com](mailto:sachagoldman@icloud.com)

### Website

[sachagoldman.com](http://sachagoldman.com)

### Github

[SachaGoldman](https://github.com/SachaGoldman)

### LinkedIn

[Sacha Goldman](https://www.linkedin.com/in/sachagoldman)

## Awards

New College Council  
In-Course Scholarship

William and Shirley Read  
Scholarship

VSU District Scholarship

## Education

**Computer Science and Mathematics** University of Toronto  
3.83/4.0 GPA Graduating May 2023

Bachelors of Science

Focused on math and theoretical computer science, taking courses in probabilistic learning, deep learning, algorithms, data structures, probability theory, real analysis, calculus on manifolds, topology, linear algebra, and group theory.

## Research

**Quantum Machine Learning** University of Toronto

Toronto, 2022

Conducting research with Nathan Wiebe into bringing the core ideas of convolutional neural networks into the context of quantum machine learning. Specifically, trying to learn data with translation and scale invariant properties, and trying to avoid the vanishing gradient challenges presented by traditional quantum neural networks.

## Experience

**Apple** Software Engineer Intern

Remote/Cupertino, 2022

Swift Typescript Frameworks

Working on the team architecting Apple Media Apps. Developed my skills writing both Swift and Typescript to deliver value to many key services.

**University of Toronto** Teaching Assistant

Toronto, 2021

Tutorials Marking Theory of Computer Science

Teaching assistant for CSC236, an introductory course to computer science theory. Taught two weekly tutorials, covering concepts like induction, automata, formal languages, and computational complexity. Also marked tests and assignments.

## Projects

### K2

macOS App

Machine Learning Python Swift

K2 improves upon Apple Photos' built-in facial clustering by scanning your photo library and creating an album of each unique face found. The application uses the Photos API to find the pictures, then runs python subprocesses which find the faces in each photo, using a SVM, and vectorize them, using a CNN. These feature vectors are then clustered using DBSCAN.

Hurdles overcome included tuning the finicky model hyperparameters, and code signing python for the Mac App Store.

Website

Vue TypeScript

My personal website serving as a home page for my presence online. This website was created from scratch in Vue and showcases my projects and academics.

Prevailed over the challenge of learning Vue, as it was a completely foreign the framework.
